Instructions

Lorem ipsum dolor sit amet, consectetur adipiscing elit. Nullam aliquam eleifend tincidunt. Sed id felis condimentum, commodo tortor ut, tempor risus. Iac turpis egestas. Curabitur vel purus sollicitudin, auctor nunc at, porttitor nibh.

Here's how we get started.

First name

What phobia are will you be addressing?   ◯ Arachnophobia   ◯ Other

"OTHER" will trigger alert informing user that app only addresses arachnophobia for now.

Question one

Question two

Question three

Question four

Question five   ◯ True   ◯ False

numerical questions with dropdowns (rank from 1 to 10). radio buttons for true/false.

SUBMIT

this section is shown when user hits "submit"

User assessment text with invitation to begin exercises. (assessment will be based on user responses to questions above.

X

BEGIN EXERCISES
nav bar changes.
add links.

<p> text

input: type:submit
radio buttons
selectors
(form set up)

submit:
function generates user assessment message and affects where begins in exercise page.

on submit: save to local storage

form input validation (submit with incomplete form - alert)

begin exercises button link

? | last level | similar images | next level | ⚠️

trigger for panic page

Level 2, image 2 of 3.

logic:
start point from local storage

nav links to other pages

button: next image event handler (same level).
next level: even handler to first image of next level. Add level to local storage.
last level: event handler to first image of last level.

panic button: make image selected panic image & change text similar images button to "resume". (if resume pushed, go back to pre-panic image: event handler).

event handler: space bar as panic button image.

help: links to how this works page. (anchor points in html)

concat text: level 2 + image # (array of levels with embedded array of images)

video: last level is video.

chart will show what level you got to by visit.
local storage: each visit # logged with level and date (can be multiple visits on one day).

Your Progress
